GEOTECHNICAL REPORT
For : Proposed Building Areas 1, 2 & 3
AT : Nightcap Village Mebbin

Dear Sir,

Australian Soil & Concrete Testing Pty Ltd at your request has undertaken a Site Inspection and Investigation at Nightcap Village, Mebbin in the proposed building areas. From the results of Dynamic Cone Penetrometers and Augered Boreholes across the subgrade in the three proposed building areas, the sites have been classified as follows :

- Area 1 - Class M : Moderate Reactive
- Area 2 - Class H : Highly Reactive
- Area 3 - Class S : Slight Reactive in accordance with the guidelines of AS 2870.

The Dynamic Cone Penetrometer tests in the subgrade at the three sites indicate the bearing capacity to be : 100 kPa from 300mm below the surface in the three areas

The Potential Hazard Classification of the site is :
Class C : Minor Hazard in accordance with Appendix E, Table 1 of AS 1726.

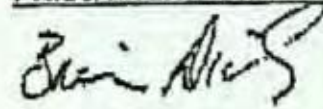

From initial investigations, site observations and onsite testing the three sites vary in terrain and slope. Area 1 is on top of a ridge line facing south, with the proposed building area cleared and grassed. The embankment slope along the ridge is approximately 35% and is heavily grassed with scattered trees and undergrowth. The ridge is considered stable and the building sites are a satisfactory distance from the steep slope of the embankment.

Area 2 is a moderately sloped 20 to 25% hill facing southeast, with the proposed building area across the slope from the middle to the toe of the hill. The site is grassed with scattered trees and there were no signs of slope instability.

Area 3 is a cleared slightly sloped area at the end of a ridge. The site is sloped 2 to 3 % southeast, grassed with scattered trees along the edge of the embankment slope and the sides of the ridge. The proposed building area is sufficiently wide to accommodate the building envelopes with the slope 20% on both sides of the ridge outside the building area.

There were no signs of slip or settlement at the three sites investigated and the proposed areas have been assessed as stable and will not be affected by landslide or subsidence when the proposed village is constructed. The results of all testing performed are attached for your information and should you require any further assistance, please do not hesitate to call myself.

Yours Faithfully,
Australian Soil & Concrete Testing P/L

Report on Soil Penetration Resistance

Client: Hardings	Project no: 079 - 069	Location: Nightcap Village Mebbin
Test methods: AS 1289 6.3.2	Report no: 079 - 069 - 001	Date Tested: 4/5/06
Lab No: 5980	Layer: Subgrade	Test location: Proposed Building areas 1, 2 & 3

Test 1

Depth below surface at commencement of test: 0mm

Graduation Interval mm	Cumulative depth m	No. of Blows Required	Soil Description	Moisture Condition
300	0.30	11	Gravelly Silty Clay: brown yellow	Moist
300	0.60	14	"	"
300	0.90	14	Gravelly Silty Clay: brown grey	"
300	1.20	17	Gravelly Silty Clay: brown grey / Silty Clay/Clay: grey orange brown	"
300	1.50	20	Silty Clay / Clay: grey orange brown	"
300	1.80	30	Clay: grey	"
300	2.10			

Test 2

Depth below surface at commencement of test: 0mm

Graduation Interval mm	Cumulative depth m	No. of Blows Required	Soil Description	Moisture Condition
300	0.30	8	Silty Clay: red brown grey	Moist
300	0.60	9	"	"
300	0.90	10	"	"
300	1.20	13	"	"
300	1.50	16	Silty Clay / Clay: grey orange brown	"
300	1.80	24	Clay: grey	"
300	2.10			

Test 3

Depth below surface at commencement of test: 0mm

Graduation Interval mm	Cumulative depth m	No. of Blows Required	Soil Description	Moisture Condition
300	0.30	7	Clayey Silt: grey brown	Moist
300	0.60	8	Sandy Clay: orange grey brown	"
300	0.90	11/200	Sandy Clay: orange grey brown / Sandy Clayey Gravel: yellow orange brown	Dry
300	1.20			
300	1.50			
300	1.80			
300	2.10			

Test 4

Depth below surface at commencement of test: 0mm

Graduation Interval mm	Cumulative depth m	No. of Blows Required	Soil Description	Moisture Condition
300	0.30			
300	0.60			
300	0.90			
300	1.20			
300	1.50			
300	1.80			
300	2.10
